

KAMIL UCHWAT

ABOUT

Ambitious programmer with a passion for technology and acquiring valuable experience in software development. My strong programming fundamentals and ability to learn quickly allow me to smoothly transition from one technology to another. My dedication to personal growth has taught me how to create useful applications for everyday use. I aspire to leverage my determination and learning abilities to actively collaborate with experienced mentors and fully engage in diverse projects.

SKILLS AND PROJECTS

C++:

- Pathfinding visualizer made with SFML library
- Database application: CRUD type application with data filtering (in progres).

Python:

- Neural network for natural language processing from scratch.
- Ai model for hand movement recognition made with keras and tensorflow.
- Full stack application with flask, mysql and custom REST API, (otodom clone, i'm currently leader of backend team).

C# .NET:

- **Internship at E-bi:** Developed user authentication mechanisms, including the creation and management of user sessions and access/refresh tokens, as well as facilitating secure communication between them. Full stack web application with repository design and MVC – from scratch with help of entity framework and ssms.
- **Full-stack Web Application Development:** Built a full-stack web application from the ground up using the repository design pattern and MVC architecture, leveraging Entity Framework and SQL Server Management Studio (SSMS) for database management.

Languages:

- Polish – Native
- English – Intermediate/advanced

Github:

- Proficient in utilizing GitHub for version control, collaboration, and showcasing projects.
- Experienced in managing repositories, creating branches, merging pull requests, and resolving merge conflicts.

EXPERIENCE**SKNI KOD – STUDENTS SCIENCE CLUB**

2022 - Now

Ai model for translating sight language into text.

Ai classifier for documents based on scan of the document.

IDEA COMMERCE S.A – INTERN PYTHON DEVELOPER

19.02.2024r. – 19.03.2024r.

On internship I had my first experience with posgreSQL, XML and odoo. My job was to create module for adding notes to invoices and connect those to sale orders.

E-BI.COM – INTERN C# .NET DEVELOPER

02.09.2024r. – 30.10.2024r.

Enhanced my understanding of project structuring, user action security, and database architecture. I developed authentication APIs from scratch, implemented token management logic, and handled user sessions to ensure secure and efficient user interaction.

CONTRACTOR FOR THE RZESZÓW UNIVERSITY OF TECHNOLOGY

03.02.2025r. – 31.03.2025r.

I completed an order for a company from Krakow under the supervision of the University of Technology, which involved the creation of a module allowing for resource planning based on the Bryntum library.

**CURRENT
EDUCATION****UNIVERSITY OF TECHNOLOGY IN RZESZÓW – STUDENT**

2022 – now

SKILLS

I would like to gain as much experience as possible from your mentors and individuals who have been working in industry for a longer time. On my own, I have extensively studied creating neural network models for tasks like gesture recognition and document classification (with focus on model creation and data preparation) using Python and its libraries.

Since I have a strong programming foundation, transitioning between technologies is not a significant challenge for me. In addition to the mentioned technologies, I have also familiarized myself with Java, C and C++. Furthermore, I am proficient in version control systems such as Git.
